

MAST IMPROVES EFFICIENCY AND GOVERNANCE IN DOCUMENTING LAND RIGHTS

MAST is More Efficient. MAST allows citizens to map and document their land and resources in less time than traditional land administration methods. MAST leverages innovative methods and tools to engage citizens in inclusive approaches that increase efficiencies over time.

9 Times Faster. In Burkina Faso, the MAST approach mapped and documented customary land holdings roughly nine times faster than traditional mapping and surveying techniques.

COST OF TITLING PER PARCEL (USD)*

MAST Is Less Expensive.

MAST allows citizens to map and document their land and resources at less cost than traditional technologies and approaches.

MAST allows communities to demarcate land more cost effectively than traditional methods. In Tanzania, MAST technology and its inclusive approach have resulted in significant cost savings. Prior to the introduction of MAST, the cost for mapping land parcels in Tanzania was around \$40.00. The introduction of MAST in 2016 reduced costs to \$20.57, and as the project has been scaled, mapping costs on a per parcel basis have been further reduced to \$7.85.
